

# The Pursuit of Liberation and Enlightenment with depth and with diligence

---

It is a culturally propagated influence:

**simplify and generalize!**

Why?

Because we are cognitively impaired.

We are and we have become closed.

We seek certainty.

Analysis is the method:

to know by taking things apart,

with our minds or with our hands.

One scientific method commends us

to isolate and to define.

We presume a single path connection

of cause and effect.

In fact, at the juncture,

some will say:

is there an alternative?

Yes.

Hermann Weyl discovered:

that there is no such thing

as one and the same

increment of energy,

which constitutes a charge

at any two adjacent increments of time.

Energy flows into and out of

every charge or every charge fraction (quark).

We didn't even have a clear concept

of **energy**, until the twentieth century.

# The Pursuit of Liberation and Enlightenment with depth and with diligence

---

We knew that work was defined as:

mass times displacement

(in the dimensions of space).

We know that it takes more of something (energy)

to move mass,

over the same distance,

in half the time.

We finally came to understand

the equivalence between mass and energy,

in 1903.

This discovery was due to an Austrian,

Hassenhörl.

Minkowski propagated the principle.

Einstein popularized it.

This equivalence between mass and energy

follows the equation

$$E = mc^2.$$

Energy has a value following relationship

to mass or to matter

times the velocity of light squared.

In quantum mechanics,

light is considered a wave,

when it travels.

Light is considered a particle, the photon,

when it interacts.

# The Pursuit of Liberation and Enlightenment with depth and with diligence

---

However, the reason we square  
the velocity of light  
is because we have  
both the structure of the charge  
and the motion of the charge,  
each made out of light.

Is this a full inventory  
of all of the energy  
in physical reality or in all realities?

No !

Allain Aspect experimentally showed  
that when two photons  
are separated  
with a semi-transparent mirror  
and they travel  
to about twelve meters apart,  
when one is polarized  
the other is simultaneously polarized  
in less than a thirty billionth  
of a second  
(beyond the velocity of light).

How ?

Some have speculated  
that there is another form of energy,  
a tacyon.

# The Pursuit of Liberation and Enlightenment with depth and with diligence

---

Some, like David Bohm,  
have theorized  
the photons remain connected,  
in another dimension.

In 1968, Hoyle said  
that our everyday life  
would not be the same  
were it not for the  
existence and the processes or the events  
in the most distant parts of the universe.  
So, are those distant parts of the universe  
connected by other dimensions  
or by tacyons?

The Yin Mind sees and presumes  
the universe is connected.

The Yin Mind  
allows a "knowing by connection".

The Yin Mind opens, feels, knows  
the limits of representational knowing.

The Yin Mind offers  
an alternative paradigm  
the concatenation or the convergence  
of interdependent originations  
or of interdependent progressions:  
THE FLOW of the TAO.

The TAO prompts, challenges, urges,  
evolution.

# The Pursuit of Liberation and Enlightenment with depth and with diligence

---

Right now, more magnetic energy  
is flowing from the sun,  
230% more than in 1901.

Where will it go?  
What will it do?  
Global warming?  
Transformation?  
The extinction and the emergence of species?

We need to receive, to allow, to yield,  
to be Yin  
and receptive, open, eventful,  
aware, alert, awake.

We need to live,  
intensively and joyfully.  
We need **liberation** and **enlightenment**.
